Summary

Innovative B.Tech graduate in Computer Science and founder of VoxentraAI with a strong passion for developing impactful, AI-driven solutions. Experienced in full-stack web development and computer vision, demonstrated through a portfolio of complex projects. Proven leader and community builder as a Core Member of the Google Developer Student Clubs (GDSC), dedicated to fostering technical growth and collaboration.

Education

Satyug Darshan Institute of Engineering & Technology — Faridabad, India
B.Tech in Computer Science & Engineering — *2021 – 2025*

Prince EDU Hub — India
High School / Senior Secondary (12th Grade) - Science & Mathematics — *2019 – 2020*

Experience

Founder — August 2025 – Present
VoxentraAI — *Faridabad, India*

- Leading the vision, strategy, and development of an AI-focused startup aimed at Closing the Empathy and Latency Gap in conversational AI; deploy proactive, compliance-verified agents in BFSI and Healthcare; establish the Synergistic Trinity architecture as the global standard for trusted autonomy.
- Responsible for the end-to-end project lifecycle, from ideation and architectural design to implementation and deployment of core AI models and infrastructure.

Web Developer Intern — Jan 2025 – July 2025
CodeAther — *Faridabad, India*

- Contributed to the development of FitFuel, an AI-driven project at a technology-focused organization specializing in advanced AI solutions.
- Collaborated with the development team on front-end and back-end tasks, applying modern web technologies to deliver project features.
- Gained practical experience in a professional environment, working on real-world applications and contributing to the team's goals.

Core Member — Oct 2023 – July 2024
Google Developer Student Clubs (GDSC) - SDIET — *Faridabad, India*

- Played a key role in organizing technical workshops, coding events, and seminars for the college community.
- Fostered a collaborative environment for students to learn and grow their technical skills.
- Contributed to the growth of the tech community on campus through active participation and leadership.

Projects

Driver Distraction Detection System | *Python, OpenCV, TensorFlow, Streamlit*

- Developed a system for real-time, webcam-based detection of driver inattention and drowsiness.
- Engineered alerts using AI-powered facial analysis to enhance driver safety and prevent accidents.

AI Freelancer Agent (n8n) | *n8n, JavaScript, Gmail API, Upwork API, Notion API*

- Built a workflow to crawl platforms like Upwork and Fiverr for relevant freelance projects.
- Automated the application process by generating and sending proposals using GPT.
- Integrated with Gmail and Notion for seamless job application tracking and management.

Luxe Event Management | *React.js, Firebase, Tailwind CSS, Node.js*

- Created a centralized platform to streamline and manage events with features for guest list tracking, vendor management, and scheduling.
- Designed and implemented a responsive user interface for seamless access on both desktop and mobile devices.

LAMBDA – Live Attendance Monitoring System | *Python, OpenCV, Firebase Realtime DB, Arduino, Node.js*

- Integrated Face Detection, RFID Scanning, and Fingerprint Recognition for robust multi-factor authentication.
- Utilized a live cloud-based database (Firebase) to store and sync data, enabling real-time tracking and analytics.

Technical Skills

Languages: Python, JavaScript
Frameworks & Libraries: React.js, Node.js, TensorFlow, OpenCV, Streamlit, Tailwind CSS
Tools & Platforms: Firebase, n8n, Git, GitHub, Arduino, Notion API, Gmail API, Upwork API
Core Competencies: Artificial Intelligence, Computer Vision, Full-Stack Web Development, Workflow Automation, Entrepreneurship
