Professional Summary

Performance-driven Full-Stack Engineer and AI Automation Specialist with a strong foundation in Machine Learning and production systems. Proven track record of transitioning from a high-impact intern to a permanent developer leading system migrations at CodeAther. Expert in engineering type-safe TypeScript web applications, designing stateful multi-agent AI workflows, and constructing automated telemetry scripts to evaluate model alignment. Adept at leveraging modern AI velocity tools like Claude Code and Warp to enforce quality, speed up iterations, and implement robust code quality environments.

Technical Skills

Programming	TypeScript, JavaScript (ES6+), Python, SQL (PostgreSQL), HTML5, CSS3, C++
AI & Automation	Prompt Engineering, Multi-Agent System Design, LLM Telemetry & Benchmarking, LangChain, OpenAI/Claude APIs, OpenCV, pandas, scikit-learn, OpenRouter, Claude Code, n8n Workflow Automation
Frameworks	React.js, Next.js (App Router), Node.js, Express, FastAPI, Streamlit, Tailwind CSS
Tools & Infra	Firebase, Supabase, Git, GitHub Actions (CI/CD), Docker, Sentry, ESLint, Husky, Warp
Core Competencies	Code Review, Vetting & Grading, Logical Reasoning, AI Tool Expert, Machine Learning Engineering

Professional Experience

Jan 2025 – Present
Full-Stack Developer (Transitioned from Intern), *CodeAther*, Faridabad, India
Commenced as an intern and fast-tracked to a full-time role based on contributions to legacy migration and performance optimizations.

- Refactored legacy modular codebases into type-safe TypeScript, diagnosing structural runtime anomalies to reduce production exceptions by **18%**.
- Engineered rigorous code quality standards by writing custom ESLint rules, mocking testing suites, and establishing automated Husky pre-commit hooks to safeguard the main branches.
- Integrated telemetry tracking via Sentry to monitor dynamic client-server states, cutting critical edge-case resolution times by **25%**.
- Built optimized transactional synchronization pipelines utilizing complex relational schemas on Supabase and Firebase.

Aug 2025 – Present
Founding AI Engineer & System Architect, *VoxentraAI*, Faridabad, India
Architected stateful multi-agent infrastructure and prompt alignment metrics for domain-specialized enterprise clients.

- Designed multi-turn agent execution flows using stateful graph frameworks, enforcing structured output format validation schemas to ensure API compatibility.
- Engineered high-reliability verification layers and safety guardrails to evaluate and filter outputs for deployment in financial and healthcare platforms.
- Developed custom evaluation pipelines to benchmark LLM latency, factual accuracy, and syntactic correctess across major model endpoints.
- Curated balanced synthetic datasets mimicking natural, highly contextual multi-turn conversations to align model tone with empathetic parameters.

Oct 2023 – Jul 2024 **Technical Educator & Core Member**, *Google Developer Student Clubs (GDSC)*, SDIET, Faridabad

Served as a key technical mentor, establishing grading baselines and reviewing peer-submitted software.

- Evaluated, debugged, and graded developer code submissions for community hackathons, providing rigorous code reviews and optimization feedback to over **200** student developers.
- Developed and documented production repository templates and custom CI/CD workflows to streamline open-source contributions.
- Directed live workshops demystifying advanced architectures, state management patterns, and full-stack software development pipelines.

Selected Projects

FitFuel **Multi-Model Expert System (React, TypeScript, Next.js, OpenRouter, Ollama)**

- Built a Mixture of Experts (MoE) routing architecture that parses user prompt semantic intent to dynamically delegate queries to specialized underlying LLMs.
- Implemented spatial computer vision models to identify and analyze dish geometries, mapping outputs into structured, deterministic nutritional datasets.
- Designed a local sandbox using Ollama to run safety guardrails, testing prompt alignment and system prompt durability against jailbreak vectors.

LAMBDA **Live Attendance Monitoring System (Python, OpenCV, Firebase, Node.js)**

- Designed a high-security hardware-software authentication architecture, binding multi-threaded facial recognition tracking modules with physical RFID reader events.
- Structured low-latency websocket listeners to sync event telemetry with live Firestore nodes, ensuring instantaneous UI rendering.

Lead Processing **Autonomous Multi-Stage Pipeline (n8n, JavaScript, API Integrations)**

- Constructed background data-scraping workflows evaluating incoming listings against developer skill profiles with zero-latency overhead.
- Devised prompt engineering structures specifically configured to optimize factual context retrieval, preventing generative hallucination in targeted proposals.

Driver Distraction **Real-Time Computer Vision Tracker (Python, OpenCV, TensorFlow, Streamlit)**

- Built an offline convolutional neural network (CNN) model parsing video stream points to identify and trigger metrics signaling distraction.
- Optimized inference pipeline bottlenecks to stabilize latency metrics below **30ms** per frame.

Education

2021 – 2025 **Bachelor of Technology**, *Computer Science & Engineering*, Satyug Darshan Institute of Engineering & Technology, Faridabad, India

Specialization in Software Architecture, Machine Learning Systems, and System Analysis
